

SUHAS AMARNATH

SOC Analyst | SIEM Monitoring | Threat Detection | Incident Response

suhasamarnath123@gmail.com · +919738824208 · Bengaluru, Karnataka · linkedin.com/in/suhasamarnath

PROFESSIONAL SUMMARY

Cybersecurity professional with hands-on experience in SIEM monitoring, threat detection, incident investigation, log analysis, and enterprise infrastructure operations. Experienced in security monitoring and analysis using Splunk Enterprise Security, CrowdStrike Falcon EDR, EventTracker, Cortex XSOAR, Sysmon, Zeek, Sigma Rules, Atomic Red Team, and Windows Event Logs. Skilled in alert triage, threat hunting, security event analysis, IOC validation, phishing investigation, and incident response support. Strong foundation in networking and endpoint security with a Master of Technology in Computer Networking.

CORE SKILLS

- SIEM Monitoring & Alert Triage
- Splunk Enterprise Security (SPL, Dashboards)
- CrowdStrike Falcon EDR
- Threat Hunting & Incident Investigation
- Security Event Analysis & Log Correlation
- ServiceNow & BMC Helix
- Malware Analysis & Phishing Investigation
- MITRE ATT&CK Mapping
- IOC Validation (VirusTotal, Cisco Talos)
- Cortex XSOAR & EventTracker
- Firewall Log Analysis
- DNS, DHCP, VPN & TCP/IP Networking

PROFESSIONAL EXPERIENCE

Senior End-User Computing Engineer · Mashreq Global Services

Feb 2025 – Present

Bengaluru, Karnataka

- Monitor global infrastructure health and perform troubleshooting to ensure high availability across enterprise environments.
- Manage incidents and service requests through BMC Helix, serving as a Tier-2 escalation point for complex technical issues.
- Perform Splunk administration activities, including Universal Forwarder installation, upgrades, and troubleshooting.
- Onboard Windows, Linux, and Fortinet Firewall log sources into Splunk to improve operational visibility.
- Collaborate with infrastructure, network, and security teams to support enterprise operations and compliance requirements.

End-User Computing Engineer · Tata Consultancy Services (TCS)

Aug 2021 – Jan 2023

Bengaluru, Karnataka

- Provided L2/L3 support for enterprise end-user devices, maintaining 99.9% system uptime and achieving 95% SLA compliance.
- Managed Active Directory administration, user access management, group policies, and account lifecycle activities.
- Administered Microsoft Intune and SCCM for endpoint management, software deployment, patch management, and compliance monitoring.
- Provided end-to-end support for Microsoft Office 365 applications including Outlook, Teams, OneDrive, SharePoint, Word, Excel, and PowerPoint.
- Performed system troubleshooting, log analysis, and incident resolution across Windows-based enterprise environments.

EDUCATION

M.Tech in Computer Networking · B.M.S. College of Engineering (Full-time Program)

2023 – 2025

B.E. in Electronics and Communication · Jyothy Institute of Technology

2017 – 2021

CYBERSECURITY PROJECTS

SOC Analyst Academy | github.com/suhasamarnath/SOC-Analyst-Academy

- Built an artifact-driven blue team simulation environment covering 10 incident response scenarios including phishing triage, malicious PowerShell analysis, credential compromise investigations, and LOLBins detection.
- Performed alert triage, root-cause analysis, IOC extraction, threat intelligence enrichment, and incident reporting aligned with SOC workflows and MITRE ATT&CK techniques.
- Developed centralized threat intelligence repositories and IOC databases to support investigation workflows and security event correlation.

SOC-Fusion-Center | github.com/suhasamarnath/SOC-Fusion-Center

- Conducted threat hunting and network forensic investigations using Zeek logs and Zui (Brim) to analyze malicious PsExec lateral movement activity.
- Reconstructed attack chains through network telemetry analysis and identified indicators of compromise (IOCs) to support incident investigations.
- Authored custom Sigma detection rules to identify Living-Off-The-Land (LOLBins) techniques and suspicious execution behavior while reducing false positives.

Windows Security Lab | github.com/suhasamarnath/Windows-Security-Lab

- Deployed a Sysmon-based endpoint monitoring environment to capture high-fidelity Windows telemetry including process creation and registry events.
- Executed Atomic Red Team adversary emulation exercises and mapped host-based detections to the MITRE ATT&CK framework.
- Performed endpoint threat analysis using Sysmon and Windows Event Logs to improve detection visibility and investigation capabilities.

TECHNICAL TRAINING & SOC LAB EXPERIENCE

- Completed hands-on training in Security Operations Center (SOC) workflows including security monitoring, alert triage, incident investigation, threat hunting, and incident response.
- Worked with Splunk Enterprise Security, CrowdStrike Falcon EDR, EventTracker, Cortex XSOAR, and threat intelligence tools for log analysis and security event monitoring.
- Performed phishing investigations, malware analysis, IOC validation, MITRE ATT&CK mapping, and security incident reporting.
- Utilized AI-assisted security analysis techniques to support threat intelligence enrichment, investigation workflows, and SOC reporting.
